For more information on MesengeMu, do to the set site 'www.zmdb.lastate.edu' and follow the links for 'ResemeMu.' Grid H was grown at Berkefory in 2001. BAN was extracted from leaf punches, double disposted using HamHI and Bglll, and ligated to form circular plasmoss. BHIOB cells were transformed and then screened on Lie plates with ampleillin."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence 1s elected from those defined in the specification. The primer sets can be used in antisense therapy and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03165 to AAH13628 and AAH313633 to AAH4242 represent human cDNA sequences; AAB92446 to AAH3693 represent human amino acid sequences; and AAH13629 to AAH13632
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination
New method of modulating fruit ripening or tissue senescence characteristics of Musa plants - by introducing DNA sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary

                                                                                                               AAV69440-V69512 are cDNA sequences which are used in a method to modulate the fruit ripening or tissue senescence characteristics of Musa acuminata (banana) plants. The method provides a recombinant way of modulating ripening/senescence characteristics of bananas, which are a globally important crop. In particular, the method can modulate such characteristics in the dessert banana, which due to its triploid nature
                                                                                                                                                                                                                                      New method of modulating fruit ripening or tissue senescence characteristics of Musa plants - by introducing DNA sequences, useful in processes for modifying plant/fruit ripening characteristics

Vectors comprising the cDNA sequences may be used to produce transgenic bananas with altered fruit ripening characteristics. The crientation of the pASC6 and pACCS7 used in the construct, will determine how the ripening process is affected. If the genes have a sense orientation, and transcribe mRNA that encodes an active enzyme, the rate of ripening will be increased (up-regulation) (however, full-length sense constructs can also be used to inhibit enzyme expression by conhibition). If genes encode antisense mRNA, they will inhibit the expression of the genes involved in fruit ripening and hence slow the process down (down-regulation). In this manner different spatial and the process down (down-regulation). In this manner different spatial and the process down (down-regulation). In this manner different spatial and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             in good condition. In this way high quality ripe fruit can be made available to the consumer with reduced requirement for post-harvest treatment. High quality fruit will have improved flavour and texture. High quality fruit can be produced consistently over a wide harvest period, and such fruit can be held in store for long periods and ripened to optimal quality by the supply of exogenous ethylene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 an ethylene-forming enzyme (EFE), where (I) is in sense or antisense configuration, and modifies the level of activity of ACS or EFE. This retards the rate of ripening in banana fruits which reduces the rate of deterioration of banana fruit after harvest. As a result, fruit may be harvested when they have reached partial or full ripeness and still have the robustness to withstand handling and transport to reach the consumer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       genus Musa by inserting into the genome of the plant a DNA sequence (1) encoding a banana 1-aminocyclopropane-1-carboxylic acid synthase (ACS) or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH3533 to AAH18742 represent human cDNA sequences; and AAH3629 to AAH3632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-df primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end

AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from Wilming the first the first of the control of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     quantitating a polypeptide in tissue, as molecular weight markers and at a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tays for identifying expressed genes. (I) is useful in gene therapy techniques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                misc_signal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1021 ACCACGCCCGATCACGCACCTCT 1043

(I) is useful as hybridisation probes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1238 ACCTCAACTTAGCACCCACCTTT 1216
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Clone 7 from a human adult leukocyte genomic library was analysed. The analysis revealed that human EC-SOD contains three exons and two introns. The intron-exon boundaries are shown in AAQ88062-Q88065 AAQ88057 shows the entire sequence for the human EC-SOD gene. Exon 3 contains the entire uninterrupted coding region. An obviour TATA box cannot be discerned for the EC-SOD gene. Two CAAT box elements
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        were identified. One is in the reverse orientation and located about 20bp upstream of the first exon. Transcriptional factor database searching of the 5'-nontranslated region and first exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Super:oxide dismutase mimetic(s) comprising a nitrogen-containing macrocyclic moiety - useful in treatment of inflammation, musculature disorders, atherosclerosis or gout.
               Homo sapiens
                                                                                                                                                                                                                                                     Human EC-SOD gene
                                                                                                                                                                                                                                                                                                        06-FEB-1998

They can be used for e.g. treating inflammatory conditions, treating disorders resulting from aberrant smooth muscle function or to protect against ischaemia reperfusion injuries associated with myocardial infarction, stroke, acute head trauma, organ reperfusion following transplantation, bowel ischaemia, pulmonary infarction, surgical occlusion of blood flow, and soft tissue injury. They can further be used to protect against damage to the eye due to sunlight (and to the skin) as well as glaucoma, and macular degeneration of the eye. Diseases of the bone are also amenable to treatment with the compounds, and connective tissue disorders
                                                                                                                                                                                                                                    treated with the compounds. In the oxidant scavengers, substituents can be selected to render them resistant to degradation by haemoxygenase and also so that they do not interfere with normal porphyrin metabolism, can pass through cell membranes and bind to cell surface or extracellular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 a tetrameric glycosylated copper and zinc containing superoxide dismutase enzyme. The oxidant scavengers can be used for protecting against the deleterious effects of oxidants and for modulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          macrocyclic moiety and a cell surface or extracellular matrix targetting moiety, or their salts. The present sequence encodes the human EC-SOD,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New porphyrin-type oxidant scavengers - used for protecting against oxidants and for modulating biological processes involving oxidants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Batinic-Haberle I, (Fridovich I, Oury T,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best
                                                                                                                                                Streptococcus pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S. pneumoniae genome (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in SEQ ID NO:1 to 391, identifying members of the library which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating mRNA, DNA or CDNA produced from an organism, amplifying nucleic acid molecules whose nucleotide sequence is homologous to amplification primers derived from the fragment of the S. pneumoniae genome to prime the amplification and isolating the contains of the S. pneumoniae genome to primers derived from the fragment of the S. pneumoniae genome to prime the sequence of the S. pneumoniae genome to prime the sequence of the S. pneumoniae genome to prime the sequence of the S. pneumoniae genome to prime the sequence of the S. pneumoniae genome to prime the sequence of the S. pneumoniae genome to prime the sequence of the S. pneumoniae genome to prime the sequence of the S. pneumoniae genome to prime the sequence of the S. pneumoniae genome to prime the sequence of the S. pneumoniae genome to prime the sequence of the S. pneumoniae genome to prime the sequence of the S. pneumoniae genome to prime the sequence of the S. pneumoniae genome to prime the sequence of the S. pneumoniae genome to grant of the S. pneumoniae genome to genome the sequence the sequence of the S. pneumoniae genome to genome the sequenc

           readable medium can be used in a computer-based system for identifying fragments of the S. pneumoniae genome of commercial importance, or expression modulating fragments of the S. pneumoniae genome. Products from the present invention can be used in diagnosis kits and assays, and the present invention can be used in diagnosis kits and assays, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a computer readable medium which has the nucleotide sequences SEQ ID No:1 to 391 (AAV52134 to AAV52524) recorded on it, or a representative fragment or a sequence at least 95 identical to SEQ ID NO: 1 to 391. The nucleotide sequences depicted in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Computer-readable medium with recorded Streptococcus pneumoniae polynucleotide sequences - useful in diagnostic kits and assays, pharmaceutical compositions and vaccines for Streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 10079 BP; 2482 A; 2612 C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  containing enzyme. The enzyme is used to illustrate the activity of the porphines of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Streptococcus pneumoniae; S. pneumoniae; genome; diagnosis; assay; computer readable medium; vaccine; pharmaceutical composition; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAV52205 standard; DNA; 14872 BP

Primers based on sequences in the rNNA gene (see AAQ88229-Q88230 which are derived from nucleotides 1556-1575 and 2257-2276 of AAQ88228, respectively) can be used to amplify regions of rRNA genes from various different types of citrus fruits. RPLP analysis and DNA fingerprinting of the amplified fragments allows different species to be distinguished.

                                                                                                                                                                                                                                                                                                                                                                                                                            transcription termination and polyademylation region which preferably is active in plant cells. The present sequence represents an oligonucleotide from the present invention. Transformed plant cells and transgenic plants comprising the DNA constructs are used to produce a desired protein at a high yield, e.g. antibodies, insecticidal proteins (e.g. a Bt toxin), a protein useful in the food industry. Alternatively the constructs can be used to produce an antisense RNA or ribozyme. The use of intergenic ribozomal DNA enhances stability and the copy number or expression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A DNA construct has been developed which comprises the following operably linked DNA fragments: (a) a ribosomal DNA sequence, preferably

livestock. It is recognised as being closely related to Toxoplasma gondi. Comparison of LSU rDNA of N. caninum with a consensus sequence derived for the LSU rDNA of T. gondii demonstrated that the 12 domain (C1/C1') region can serve as a target for the development of a species-specific PCR (see AAVT2869-75) for the
                                                                                                   detection of Neospora rDNA, especially in clinical samples. In addition, PCR MIMICS have been developed for use in competitive PCK assays (see AAV/23676-81) to differentially diagnose between Neosporaspp. and other related/non-related micro-organisms, particularly
                                                                                                                                                                                                                                                                                         fragments obtained by PCR amplification of N. caninum (NC-Liverpool strain) tachyzoite genomic DNA. N. caninum is a cyst-forming corcidian parasite that causes neuromuscular disease in canines and is a significant cause of abortion and meonatal mortality in

                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                Pheumocystis carinii in immunosuppressed Sprague-Dawley rats. The specification describes a method for the diagnosis of Pheumocystis carinii which comprises detecting the presence of a nucleic acid sequence containing the 26S rRNA gene specific for P. carinii in a sample. The 26S rRNA gene in a sample is amplified, and the primer extension products detected by hybridisation with a labelled cligonucleotide. The methods can be used for the diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Detection of Pneumocystis carinii - by amplification of nucleic acid from sample with PCR primers specific for the 26S rRNA gene of Pneumocystis carinii
                             Contiguous sequence determined for P. carinii from immunosuppressed rats

                                                                                                                                               The present sequence represents the contiguous sequence determined for Pneumocystis carinii from immunosuppressed Sprague-Dawley rats, using the in vitro method of the invention. The method assays for an inhibitor of the catalytic Group I self-splicing intron reaction in the nuclear rRNA genes of P. carinii. The method is useful for screening potential drugs for treating P. carinii infections before more costly animal

           It is characterised as an RNA binding protein (RNP-1). The invention provides PRGE polypeptides (see AAY58608-38) and polynucleotides (see AAZ57839-69), expression vectors, host cells, antibodies, agonists and antagonists. It also provides methods for diagnosing, treating or preventing disorders associated with expression of PRGE. Polynucleotides are also used as sources of probes and primers for diagnosis and monitoring of disease, also for detecting related
                                                                                                                                       PANCTUTO2, and the full-length sequence assembled from overlapping clones from a number of libraries. PRGE-30 is expressed in nervous
                                                                                                                                                                  The present sequence is that of Incyte clone 1977214 encoding new human protein regulating gene expression PRGE-30 (see AAY58637). cDNA was initially isolated from pancreatic tumour cDNA library

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 3073 BP;
                           at ftp.wipo.int/pub/published_pct_sequences
                                       Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                  activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or
                                                                                                                                  production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating
                                                                                                                                                                                            The invention relates to human polynucleotides (AA179941-AA193841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce

This invention describes a nucleic acid seqment that encodes a novel human HET polypeptide which has cytostatic activity. The HET protein binds to the hsp27 promoter in order to suppress expression of the hsp27 protein. The HET protein (Hsp27-ERB-TAT binding protein) can bind to the hsp27 promoter and suppress expression of hsp27. The HET acts as tumour suppressor gene. The products and methods can be used for the diagnosis and prognosis of breast cancers including infiltrating duct carcinoma, lobular carcinoma, medullary carcinoma, mucinous carcinoma, tubular carcinoma, ductal carcinoma in situ and lobular carcinoma in

CC inbosomal DNA from S. cerevisiae, flanking a genetic marker suitable CC for selection of the yeast transformants in which the integration CC event has occured. Other DNA sequences may be introduced into the CC integration plasmid, such as expression cassettes. The gene HIS3 CC from K. lactis and S. cerevisiae is pref. used as a genetic marker CC for the selection of transformants and an expression cassette for the CC production and secretion into the culture medium of human lysozyme. CC This complete transformation vector is 7850 bp long and includes the CC integration vector of the invention and an expression cassette CC comprising the K. lactis GAL7 promoter, the signal sequence of the K. CC lactis killer toxin, the cDNA encoding the ripe form of human lysozyme CC (HLZ) and the transcription termination signal FLP of the 2 micron CC plasmid from S. cerevisiae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                integrating vector which comprises a region necessary for the stable maintenance of the plasmid in E. coli and a domain which acts as an integrating unit consisting of two not contiguous sequences of the 20 integrating unit consisting of two not contiguous sequences of the 20 integrating unit consisting of two not contiguous sequences of the 20 integrating unit consisting of two not contiguous sequences of the 20 integrating unit consisting of two not contiguous sequences of the 20 integrating unit consisting of two not contiguous sequences of the 20 integrating unit consisting of two not contiguous sequences of the 20 integrating unit consisting of two not contiguous sequences of the 20 integrating unit consisting of two not contiguous sequences of the 20 integrating unit consisting of two not contiguous sequences of the 20 integrating unit consisting unit consisti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents a genetic vector which allows the stable multiple integration of DNA sequences into the genome of Kluyeromyces lactis and Saccharomyces cerevisiae. This sequence can be used in an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Candida albicans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Detection of infectious disease; fungal disease agent; probes; diagnosis; ds.

engineering. Using ESTs provides several advantages over genomic or random cDNA clones including elimination of redundancy as one spot on an array equals one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate analysis of the results. AAF07478 to AAF11247 represents ESTs from Asperqillus niger; AAF11854 to AAF11858 represents ESTs from Asperqillus oryzae; and AAF11859 to AAF1387 represents ESTs from Asperqillus oryzae; and AAF18679 to AAF1337 represents ESTs from Triboderma reesei, which are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   same genes in one or more second filamentous fungal cells. Monitoring the global expression of genes from Fr cells allows the production potential of the microorganisms to be improved. New genes may be discovered, possible functions of unknown open reading frames can be identified and gene copy number variation and stability can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from the FF cells and a substrate of expressed sequence tags (EST). The ESTs are used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the
